

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

IX. Affectus Cutaneus singularis, *ab Abrahamo Vätero, Anatomes & Botanices in Academia Wittembergenfi Professore publico, R. S. S. Regali Societati communicatus.*

IN Transactionibus Philosophicis Illustrissimæ Societatis Regiæ, N° 424, pro Mensibus Julio & Augusto, Anno MDCCXXXII, recensetur Casus rarissimus pariter ac curiosissimus, cutis, aut potius cuticulæ prave constitutæ in puero rustico XIV annorum, quæ talem crassitiem & duritiem habet, ut corticem potius arboris, quam cutem humani corporis referat, quæ thecæ instar totum corpus, excepta facie, volisque manuum ac pedum, ita involvit, ut puer quasi in ea reconditus videatur, quam quotannis regeneratam autumnî tempore, exuviarum instar, decidentem exuit ac deponit. Casum hunc apprimè illustrat, quam nuper a Medico Clarissimo, Domino Licentiatò Harnischio, Gera in Variscia Illustrissimorum Comitum Ruthenicorum sedè, ad me perscriptam accepi, historia puellæ IX annorum, ibidem viventis. Hæc ante aliquot annos tumore artuum & totius corporis laboraverat, ad quem curandum, cum varia a parentibus remedia, præcipue domestica aut empirica adhiberentur, factum est, ut tumor durus insignis in dorso inter scapulas generaretur, quem gibberis initium judicantes itidem topicis discutere studuerunt votique etiam sui com-

potes facti sunt. At quid fit? Ab isto tempore sensim in manibus pedibusque, imprimis in horum plantis ac istarum volis, generari cœpit crusta sicca atque dura, quæ in apicibus digitorum longe prominet, ac apprehensionem gressumque impedit, adeo ut puella nec stare, nec incedere potuerit, sed portari ac curru vehi opus habuerit. Crusta hæc per intervalla decidit, præprimis post inunctiones varias a parentibus applicatas, sed puella inde male habuit, tumida evasit, anxietates & tormina intus sensit, quæ non nisi crusta ista regenerata cessarunt; hoc autem facto, nil amplius incommodi percepit, præterquam quod usu manuum pedumque destitueretur. Ab anni spatio denuo hoc malo afflicta Chirurgi curæ tradita fuit, qui illam laxantibus Mercurialibus atque decoctis sanguinem purificantibus tractavit, quibus etiam malum cessit, ac mundities cutis restituta est, adeo ut puella nunc integra sanitate frui videatur: quæ an constans sit futura, tempus docebit. Accepi a laudato Medico portionem hujus crustæ, cum frustulo ejusdem ab apice digiti deciduo, tantæ longitudinis & crassitiei, ut extremum digiti articulum referat, eo magis, quia in uno latere particulam unguis monstrat. Microscopio inspecta hæc crusta, manifesto apparet, eam ex squamulis conflata esse, quod eo certius est testimonium, illam nil aliud, quam ipsam cuticulam, a nutrimento viscido & tartareo expansam & indurata esse. Ex ejusdem supra laudati Viri relatione habeo, in urbe ibidem vicina pariter reperiri virginem, quæ a longo inde tempore, bis in anno, talem deponit crustam, a manibus pedibusque, necnon a cubito deciduam, quæ nullam a quibuscunque Medicamentis hætenus usurpatis,

ustirpatis, levamen percepit. Laborat autem ista obstructione mensium, quæ mali huius fons atque origo esse videtur.

Wittenbergæ D. 1 August.

A. D. MDCCXXXV.

X. Experiments concerning the Vibrations of Pendulums. By the late W. Derham, D. D. F. R. S. and Canon of Windsor.

THE Account which Mr. *Bradley* hath given in *Philosoph. Transact.* N° 432, of Observations made at *Jamaica* by Mr. *Campbel*, with a nice *Pendulum-Clock* of Mr. *Graham's* making, brought to my Mind some Experiments I made some Years ago, that may be of Use in Observations of this nature.

The first that I shall take notice of, shall be some Experiments I made in the Year 1704, with excellent Instruments, concerning the *Vibrations of Pendulums in Vacuo*; which were published in the *Philosoph. Transact.* N° 294. The Sum of which is, That the Vibrations in *Vacuo* were larger than in the *open Air*, or Receiver unexhausted: Also that the Enlargement or Diminution of the Vibrations, was constantly in Proportion to the Quantity of Air, or Rarity, or Density thereof, which was left in the Receiver of the Air-Pump. And as the Vibrations were larger or shorter, so the Times were augmented, or diminished accordingly; *viz.*
